

# SolidX Litepaper

## Abstract

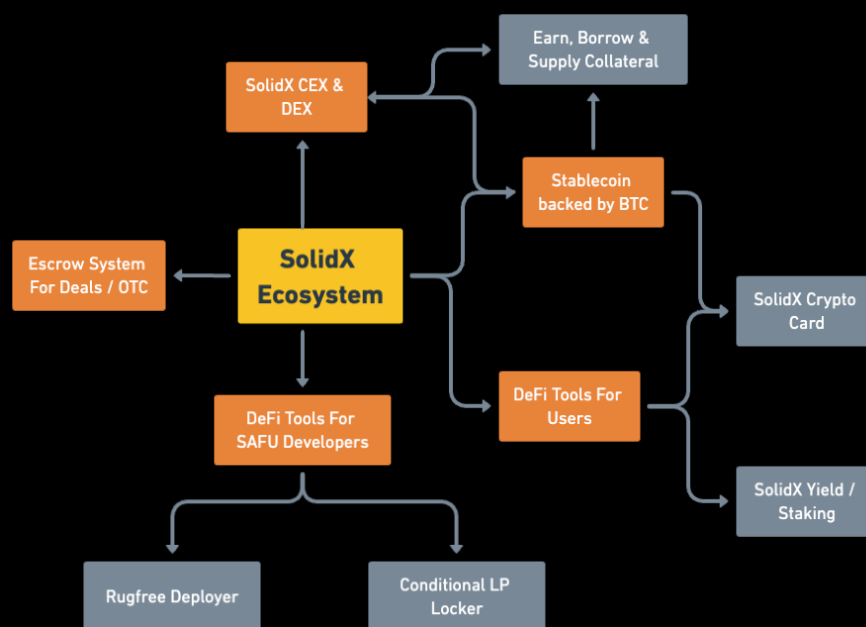

This litepaper outlines the key components of the SolidX platform, a decentralized crypto escrow service that aims to revolutionize transactions and deals in the cryptocurrency landscape and much more. By prioritizing security, transparency, and efficiency, SolidX will mitigate the risk of fraud, build trust among participants, and accelerate the adoption of cryptocurrency. This document provides an overview of the upcoming features and milestones planned for SolidX.

# 1. Introduction

SolidX will offer a decentralized crypto escrow service that aims to transform how transactions and deals are conducted in the cryptocurrency industry. By leveraging blockchain technology, SolidX will enhance security, transparency, and efficiency to mitigate risks and foster trust among participants. Among the Escrow services, SolidX will also offer many more services that are lacking in the DeFi space and what could be done better. Find the graph below.

*Ecosystem Graph*

## 2. SolidX CEX & DEX

SolidX will include a centralized exchange (CEX) and decentralized exchange (DEX) that will provide users with seamless trading experiences. The CEX will offer a user-friendly interface for quick and easy trading, while the DEX will enable peer-to-peer trading without intermediaries. CEX will also include all SolidX services in one place.

## 3. Escrow System for Deals / OTC

SolidX's robust escrow system will facilitate secure transactions for both deals and over-the-counter (OTC) trades. The system will ensure that funds are held in escrow until all parties meet the predefined terms, providing a trustless and efficient process.

## **4. SolidX Ecosystem**

The SolidX ecosystem will encompass various features and functionalities to enrich the user experience. This will include DeFi tools for SAFU developers and users, a rugfree deployer, a conditional LP locker, the SolidX crypto card, and more.

## **5. DeFi Tools for SAFU Developers**

SolidX will provide a comprehensive suite of DeFi tools for SAFU (Secure Asset and Fund Usage) developers. These tools will empower developers to build secure and reliable decentralized finance applications on the SolidX platform.

## **6. Rugfree Deployer**

SolidX will ensure the security of smart contracts deployed on its platform with its rugfree deployer. This tool will analyze and audit smart contracts to prevent vulnerabilities and potential exploits.

## **7. Earn, Borrow & Supply Collateral**

Users of SolidX will be able to earn, borrow, and supply collateral using the platform's integrated DeFi tools. These features will provide opportunities for users to generate passive income, access liquidity, and utilize their assets as collateral.

## **8. Stablecoin backed by BTC**

SolidX will introduce a stablecoin backed by BTC, providing users with a stable and reliable digital asset that preserves the value of their holdings.

## **9. DeFi Tools for Users**

SolidX will offer a range of DeFi tools for users, enabling them to participate in decentralized finance activities such as yield farming, liquidity mining, and decentralized lending.

## **10. Conditional LP Locker**

The SolidX platform will include a conditional LP locker, which will allow liquidity providers to lock their funds in liquidity pools under specific conditions, promoting efficient liquidity management.

## 11. SolidX Crypto Card

SolidX will introduce the SolidX crypto card, which will enable users to conveniently spend their cryptocurrency holdings for everyday transactions, bridging the gap between traditional financial systems and digital assets.

## 12. SolidX Yield / Staking

Holders of \$SOLIDX tokens will be able to participate in the SolidX yield and staking program, where they can earn rewards for contributing to the security and stability of the SolidX network.

## 13. Governance

\$SOLIDX token holders will play a crucial role in the governance of the SolidX ecosystem. They will have the ability to participate in decision-making and contribute to the platform's development and evolution.

## 14. Roadmap

SolidX has a comprehensive roadmap that outlines its development and expansion plans. The roadmap includes three phases:

- I Phase - 2023 Q4
  - MVP Ready for Launch: Development of the Minimum Viable Product (MVP) of the SolidX platform will be completed.
  - Token Launch & First 100 Deals: Launch of the \$SOLIDX token and facilitation of the first 100 secure transactions will be accomplished.
  - DAO Governance: A decentralized autonomous organization (DAO) will be established for SolidX, enabling token holders to participate in governance and decision-making.
- II Phase - 2024 Q1
  - Solid Rugproof Liquidity Locker: A rugproof liquidity locker will be introduced to ensure the safety of funds involved in transactions.
  - Multichain Expansion: Compatibility expansion to multiple blockchain networks will be implemented for increased accessibility and a seamless user experience.

- SolidX Deals Marketplace: A decentralized secure marketplace for transactions will be established.
- III Phase - 2024 Q2
  - SolidX Staking: The SolidX staking program will be introduced, allowing participants to earn rewards for contributing to network security and stability.
  - API Development & Scaling: Development of robust APIs will be conducted to facilitate integration with external platforms and enhance scalability.
  - SolidX Ecosystem Expansion: Expansion of the SolidX ecosystem through partnerships and services will be pursued to increase reach and foster collaboration with other projects in the crypto space.

## 15. Conclusion

SolidX is a groundbreaking decentralized crypto escrow service that will reshape how transactions and deals are conducted in the cryptocurrency landscape. By prioritizing security, transparency, and efficiency, SolidX will mitigate fraud risks, build trust, and drive cryptocurrency adoption. With its unique features, \$SOLIDX token, and comprehensive roadmap, SolidX aims to revolutionize the escrow industry and establish a strong foundation for the future of decentralized finance.
